Divulge the Secrets of Antioxidants

Is Alkaline Water a Key Factor?

DOCTOR #1

From Dr. Oz's Website, written by Eva Selhub, M.D.,
Instructor in Medicine, Harvard Medical School

"Oxidative stress has been linked to a myriad of health problems, including cancer, heart disease, dementia and autoimmune disorders."

"The good news is that antioxidants are like scavengers, perusing your body to find, neutralize, and get rid of these free oxygen radicals. Research shows these wonderful molecules can not only prevent and treat a whole array of health problems, but they may also extend your life."

What Does Ionized Alkaline Water Have to Do With Antioxidants?

Usually, when alkaline water is first introduced, the main benefit that is promoted is the alkaline pH of the water.

The Secret About Ionized Water

While an alkaline pH is a key advantage, the most health-enhancing benefit of all is the antioxidant properties of the water.

What Is Antioxidant Water?

Antioxidant water is water that carries a negative electrical charge. Regular tap water is purified and then acquires a negative charge by going through the ionization process of an electric ionizer.

Is It True? How Can There Be Antioxidants in Water?

The great news about the antioxidants in ionized alkaline water, or Tyent Water™, is that they are measurable. Antioxidants in ionized water are measured through a device called an ORP meter. ORP stands for oxidation reduction potential.

Let's Make This Less Technical!

Basically, oxidation is the bad guy. Oxidation causes people to age, paint to fade and nails to rust. The basic goal is to reduce the number of bad guys wreaking havoc on your body. You will find that when a substance carries a positive ionic charge oxidation is prevalent. Positively charged substances have no beneficial properties to help reduce oxidation.

Free Radicals Are Oxidizing! Let's Reduce These Bad Guys!

Free radicals are positively charged, so without antioxidants or -ORP, there is no chance to neutralize the free radicals and stop the damage.

Here's the Good News!

“When a substance has a negative charge, it is able to seek out and help neutralize the free radical damage to human cells. This neutralization is great news, considering how Dr. T. Illingsworth describes the effects of free radicals: “Chronic and degenerative diseases are caused by the cell damage produced from the tens of thousands of free radicals that are generated in our bodies every day.”

Why Are Antioxidants So Important?

Antioxidants scavenge free radicals. Their pursuit of free radicals, which damage our bodies, is vitally important to protect our health.

What Causes Free Radicals?

Natural metabolic processes

Pollution

Strenuous exercise

UV rays

Smoking

Alcohol consumption

WHAT TYPES OF DAMAGE DO FREE RADICALS CAUSE?

DISEASE

INFLAMMATION

HEART DISEASE

LUNG DISEASE

DIABETES

STROKE

ARTHRITIS

GASTROINTESTINAL DISEASE

It can also speed up the aging process, resulting in dull skin, wrinkles and sagging. Doctors and health professionals from around the world continue to learn the benefits of adding as many antioxidants as possible to your diet, and one of the easiest ways to do it is through drinking antioxidant water such as Tyent Water.

Andrew Weil, M.D., Best-Selling Author and Speaker

"Antioxidants block harmful chemical reactions caused by oxidation—the destructive effects of oxygen and other oxidizing agents on the molecular components of cells."

Besides Drinking Alkaline Water, Where Else Can I Get Antioxidants?

Vitamin C:

Vitamin C is a water-soluble vitamin. It helps track down free radicals in watery environments, such as the insides of your cells. Foods rich in vitamin C include grapefruit, oranges, tomatoes, peppers, broccoli, leafy green vegetables, cantaloupe and strawberries.

Beta-carotene:

Beta-carotene is also water-soluble. It can be found in papaya, pumpkin, apricots, carrots, winter squash, peppers, spinach, kale, mangoes, cantaloupe and sweet potatoes.

Vitamin E:

Vitamin E is a fat-soluble vitamin. It can be found in pine nuts, tomatoes, vegetable oils, walnuts, wheat germ, almonds, olives, peanuts, avocados, liver and leafy green vegetables.

Vitamin A:

Vitamin A is a fat-soluble vitamin. It can be found in spinach, liver, sweet potatoes, carrots, mozzarella cheese, egg yolk and milk.

Lycopene:

Lycopene is an antioxidant that can be found in tomatoes, watermelon, grapefruit, asparagus and cabbage.

Selenium:

Selenium is a mineral that has antioxidant properties. It can be found in seafood, chicken, brown rice, beef, pork and whole wheat bread.

"Antioxidants slow the effects of aging, slow down the loss of muscle elasticity that leads to wrinkles and put the brakes on memory failure."

So, How Can You Find the Healthiest Water?

Antioxidants in Water

As you can see, antioxidants play a key role in overall health, so get them any way you can. You will find that drinking them in a delicious glass of Tyent Water is:

- So easy
- Super hydrating
- Very cost-effective
- Splendidly convenient

Plus,

it's one of the most beneficial ways to get the antioxidants you need.

The Shocking Truth— Not All Alkaline Water Is Equal!

Alkaline water that has been produced by a Tyent Water ionizer will have a high negative ORP. The “negative” implies the reduction power (oxidation reduction) of the water.

Most tap and bottled water will have a positive ORP, and some bottled alkaline water will have a negative ORP.

If you are looking for water that is not only alkaline but also loaded with antioxidant properties, Tyent ionized alkaline water beats the competition.

How Does Tyent Water Compare?

Bottled Alkaline Water

VS.

Tyent Ionized Alkaline Water

A number of bottled waters on the market claim to be “alkaline” and carry a negative charge. However, some beneficial properties are missing. Read on.

Bottled alkaline water

cannot compete because it is treated with a blend of minerals that elevate the pH to help keep it stable on the shelf. These minerals interact with the water molecules to create only a mild negative ORP and don't offer the more significant antioxidant potential found in Tyent Water, which has been “ionized” through electrolysis.

What Is Electrolysis?

Electrolysis is an electrical current delivered to stimulate the separation of elements. Water ionizers are simply “water electrolysis” machines with filtration to remove common contaminants from the water for drinking. Every Tyent Water ionizer has an electrolysis chamber containing the largest and most highly conductive Solid/Mesh Hybrid plates in the industry. These amazing plates deliver an ionic current to the water.

How Does Electrolysis Work?

STEP
1

The electrical current delivered during electrolysis (ionization) separates the elements of water at a molecular level.

STEP
2

These molecules carry a negative charge and are drawn to one side of the water cell.

STEP
3

The molecules of the water carrying a positive charge are drawn to the other side of the water cell.

STEP
4

The water with the negative charge is dispensed from one area of the water ionizer, creating drinking water with a high number of negatively charged electrons, or a high -ORP.

STEP
5

The water containing the positively charged electrons is released through a separate hose. Through the Tyent ionization process, water with a high -ORP is created. Plus, Tyent’s filtration system removes the most common contaminants, such as chlorine and volatile organic compounds, or VOCs.

The Key Benefit of Tyent Water

When Tyent Water is consumed, the negative ions in the water actively seek out the positively charged electrons in the body (the bad guys). This process helps reduce oxidation and acts as an antioxidant.

Why Is Tyent Alkaline Water Better?

The alkaline water produced by most water ionizers on the market will have an ORP of at least -300 at the 9.5 pH level, which is the level recommended for drinking.

Tyent Water ionizers produce a -ORP of up to -800 at the 9.5 pH level.*

That's a big difference when compared to competitive brands.

*Depending on source water.

How Do Tyent Water Ionizers Create Better Water?

Tyent Water ionizers contain key components that make all the difference when it comes to creating the most antioxidants and optimal pH levels.

Tyent machines have the largest plates made of the highest quality materials. All Tyent units come standard with Solid/Mesh Hybrid plates...the plate type with the largest surface area on the market.

All Tyent machines have the most advanced power system money can buy. All Tyent units contain SMPS Plus® power systems with the highest wattage.

STARTING HERE

The Tyent 9090 Turbo and the Tyent 9000T Under-the-Counter models offer the most plate surface area and the most power over the competition.

No Other Ionized Water Can Compete With Tyent Water!

Keep in mind that higher -ORP levels help reduce oxidizing toxins from the body. Plus, the molecular restructuring of the water makes it more absorbable by the body and therefore more hydrating.

A Simple Formula for

**OPTIMAL HEALTH BENEFITS
FROM WATER IONIZATION**

A Water Ionizer With:

Larger plate surface area
Premium plate type
Higher power output
+ Advanced power source
= An ionized alkaline water with
More Health Benefits!

It's quite a simple formula!

It doesn't matter what the name of the ionizer is.

All that matters is the formula above.

BESIDES ANTIOXIDANTS, WHAT OTHER BENEFITS DOES TYENT WATER OFFER?

-Hydrates better because the water has a smaller molecular cluster size. During the Tyent ionization process, the water is broken down into a much smaller form that helps penetrate your cells faster and easier, therefore fully quenching your thirst and hydrating your body.

-Supports healthy alkalinity in the body because it has pH-enhancing technology to help fight acidosis caused by stress, UV rays, acidic foods and various other causes.

-Produces pure, filtered water you can feel good about drinking because every unit offers advanced filtration with two filters for maximum purity.

-Supports better sleep, increased energy levels and improved concentration because it is **oxygen-packed**.

Drinking Tyent Water supplies an abundance of oxygen to your cells, which means you'll feel well-rested during the day and maintain a greater ability to focus.

Ask your Tyent sales associate for more detailed information on our machine components. You will be pleasantly surprised to see all the benefits Tyent machines offer over competitive units.

TAKE CHARGE OF YOUR HEALTH NOW!

It's no secret that antioxidants are important for overall health. Doctors and health professionals have cherished their value for years and continuously strive for ways to get enough of them.

Now it's easy—drink ionized alkaline Tyent Water!

WE ARE PROUD OF YOU!

You have taken the first step in creating a healthy lifestyle by drinking ionized water. Now, it's time to make another smart decision and choose Tyent as your ionizer brand. Tyent machines have cutting-edge technology to give you the purest and healthiest ionized water available. Plus, all Tyent units are guaranteed for life.
